STATUS: DRAFT_PENDING_REVIEW | CLINICIAN SIGN-OFF REQUIRED: YES

RAW CLINICAL DICTATION / TRANSCRIPT:

"UR5 is root treated with a unilocular well defined apical radiolucency 8 by 7 by 6 mm"
". UR4 is root treated with an apical radiolucency 1 to 2 mm wide. Distal to UR8 is an"
" unerupted supernumerary tooth with an enlarged follicle space, possibly a dentigerou"
"s cyst."

STRUCTURED ANATOMICAL FINDINGS:

1. Site: Tooth 15 (Maxillary right second premolar) [Periapical / Osseous Pathology]
Finding: UR5 is root treated with a unilocular well defined apical radiolucency 8 by 7 by 6 mm
Diagnostic Certainty: definite observation

2. Site: Tooth 14 (Maxillary right first premolar) [Periapical / Osseous Pathology]
Finding: UR4 is root treated with an apical radiolucency 1 to 2 mm wide
Diagnostic Certainty: definite observation

3. Site: Tooth 18 (Maxillary right third molar) [Impaction / Eruption]
Finding: Distal to UR8 is an unerupted supernumerary tooth with an enlarged follicle space, possibly a dentigerous cyst
Diagnostic Certainty: suspected / differential diagnosis

CLINICAL IMPRESSIONS:

1. Tooth 15 (Maxillary right second premolar): UR5 is root treated with a unilocular well defined apical radiolucency 8 by 7 by 6 mm. Find
2. Tooth 14 (Maxillary right first premolar): UR4 is root treated with an apical radiolucency 1 to 2 mm wide. Findings suggestive of periap
3. Tooth 18 (Maxillary right third molar): Distal to UR8 is an unerupted supernumerary tooth with an enlarged follicle space, possibly a de

RECOMMENDATIONS & MANDATORY REVIEW:

1. Correlate with dental pulp vitality testing, percussion sensitivity, and clinical symptom history.
2. Consider targeted CBCT prior to surgical intervention if relation to neurovascular structures requires 3D verification.
3. MANDATORY CLINICIAN ACTION: Attending dentist/radiologist must review and verify all anatomical labels and findings before clini
