VISCAN DIAGNOSTICS - CLINICAL RADIOLOGY REPORT

Advanced Maxillofacial Imaging Network - Validated Diagnostic Record

PATIENT: PRIYA SHARMA

DOB: 1998-04-12 | SEX: Female

MRN: MRN-DEMO-1001

STATUS: Final Validated Report

PATIENT ID: PAT-1001

EXAMINATION: Periapical Radiograph

REPORT ID: RPT-2002

STUDY DATE: 2026-08-04

CLINICAL INDICATION & TECHNIQUE

Indication: Targeted evaluation of upper left premolar quadrant following intermittent cold sensitivity.

STRUCTURED OBSERVATIONS & FINDINGS

- **Tooth 25 (Maxillary left second premolar):**
  Intact enamel and dentinal contours. No coronal radiolucency or deep fissure defect identified. [Confirmed]
- **Periapical Region & Lamina Dura:**
  Lamina dura is continuous and uniform around the root apex. Periodontal ligament space width is physiological with no widening. [Confirmed]
- **Interproximal Contacts:**
  Slight horizontal overlap at the mesial contact with tooth 24 limits complete interproximal enamel assessment. [Limited by projection]

RADIOLOGIST IMPRESSION

- **No radiographic evidence of periapical pathosis or gross dental caries associated with tooth 25.**

RECOMMENDATIONS & CORRELATION

Perform clinical thermal sensibility and electric pulp testing. Check for cervical abrasion or exposed root dentin.
