VISCAN DIAGNOSTICS - CLINICAL RADIOLOGY REPORT

Advanced Maxillofacial Imaging Network - Validated Diagnostic Record

PATIENT: PRIYA SHARMILA

DOB: 1996-09-23 | SEX: Female

MRN: MRN-DEMO-1002

STATUS: Final Validated Report

PATIENT ID: PAT-1002

EXAMINATION: OPG (Digital Panoramic Radiograph)

REPORT ID: RPT-2004

STUDY DATE: 2026-05-21

CLINICAL INDICATION & TECHNIQUE

Indication: Evaluation of recurrent swelling and severe discomfort in the lower right retromolar region.

STRUCTURED OBSERVATIONS & FINDINGS

- **Tooth 48 (Mandibular right third molar):**
  Horizontally impacted with crown directly abutted against the distal root cervical contour of tooth 47. Substantial bone coverage occlusally and distally. [Confirmed]
- **Tooth 47 (Mandibular right second molar):**
  Distal root surface demonstrates superimposition of third molar crown; localized periodontal ligament widening at the distal aspect. [Descriptive]
- **Inferior Alveolar Canal:**
  Canal cortical roof is superimposed directly over the mid-apical third of tooth 48 roots with apparent radiolucent band across the roots. [Uncertain - Requires 3D validation]

RADIOLOGIST IMPRESSION

- **Complete horizontal impaction of tooth 48 with high risk of distal external root resorption on tooth 47.**
- **Intimate anatomical proximity to the inferior alveolar nerve canal.**

RECOMMENDATIONS & CORRELATION

Urgent maxillofacial surgical consultation for surgical extraction/coronectomy of tooth 48. High-resolution 3D CBCT is strongly indicated to evaluate buccal-lingual nerve positioning.

Reporting Radiologist: Dr. R. Mehta, MDS
