VISCAN DIAGNOSTICS - CLINICAL RADIOLOGY REPORT

Advanced Maxillofacial Imaging Network - Validated Diagnostic Record

PATIENT: RAHUL VERMA

DOB: 1994-02-08 | SEX: Male

MRN: MRN-DEMO-1003

STATUS: Final Validated Report

PATIENT ID: PAT-1003

EXAMINATION: Bitewing Radiographs

REPORT ID: RPT-2007

STUDY DATE: 2026-04-09

CLINICAL INDICATION & TECHNIQUE

Indication: Routine bilateral posterior interproximal dental screening.

STRUCTURED OBSERVATIONS & FINDINGS

- Tooth 36 Distal Surface:

Well-demarcated triangular radiolucency in outer third of dentin on distal surface below the contact point, consistent with interproximal dental caries.

Diagnostic Certainty: Confirmed

- Alveolar Crests:

Normal horizontal crestal bone height bilaterally. Intact cortical crestal lamina dura. [Confirmed]

RADIOLOGIST IMPRESSION

- Class II interproximal dental caries on distal of tooth 36.

- No evidence of periodontal bone resorption.

RECOMMENDATIONS & CORRELATION

Conservative Class II composite restoration advised for tooth 36.

Reporting Radiologist: Dr. R. Mehta, MDS
