VISCAN DIAGNOSTICS - CLINICAL RADIOLOGY REPORT

Advanced Maxillofacial Imaging Network - Validated Diagnostic Record

PATIENT: ARJUN MEHTA

DOB: 1992-06-30 | SEX: Male

MRN: MRN-DEMO-1005

STATUS: Final Validated Report

PATIENT ID: PAT-1005

EXAMINATION: Periapical Radiograph

REPORT ID: RPT-2013

STUDY DATE: 2026-04-22

CLINICAL INDICATION & TECHNIQUE

Indication: Post-endodontic evaluation of tooth 25.

STRUCTURED OBSERVATIONS & FINDINGS

- Tooth 25 Root Canal:

Dense, well-condensed gutta-percha obturation terminating 0.5 mm short of the radiographic apex. No periapical radiolucency. [Confirmed]

RADIOLOGIST IMPRESSION

- Satisfactory endodontic obturation of tooth 25 with normal periapical bone architecture.

RECOMMENDATIONS & CORRELATION

Full coronal coverage restoration (cuspal-coverage crown) recommended to protect against fracture.

Reporting Radiologist: Dr. R. Mehta, MDS
