VISCAN DIAGNOSTICS - CLINICAL RADIOLOGY REPORT

Advanced Maxillofacial Imaging Network - Validated Diagnostic Record

PATIENT: AMIT KUMAR

DOB: 1979-08-19 | SEX: Male

MRN: MRN-DEMO-1006

STATUS: Final Validated Report

PATIENT ID: PAT-1006

EXAMINATION: IOPA Radiograph

REPORT ID: RPT-2017

STUDY DATE: 2026-06-18

CLINICAL INDICATION & TECHNIQUE

Indication: Focused examination of tooth 36 furcation and periapical area.

STRUCTURED OBSERVATIONS & FINDINGS

- Tooth 36 Roots & Furcation:

Deep vertical infrabony pocket on distal root extending to apical third.
Radiolucency in the interradicular bifurcation confirms furcation involvement.
Diagnostic Certainty: Confirmed

RADIOLOGIST IMPRESSION

- Combined endo-perio lesion with Grade II furcation involvement on tooth 36.

RECOMMENDATIONS & CORRELATION

Endodontic testing. Periodontal flap debridement vs extraction and replacement.

Reporting Radiologist: Dr. R. Mehta, MDS
