VISCAN DIAGNOSTICS - CLINICAL RADIOLOGY REPORT

Advanced Maxillofacial Imaging Network - Validated Diagnostic Record

PATIENT: VIKRAM MALHOTRA

DOB: 1983-02-22 | SEX: Male

MRN: MRN-DEMO-1009

STATUS: Final Validated Report

PATIENT ID: PAT-1009

EXAMINATION: CBCT

REPORT ID: RPT-2026

STUDY DATE: 2026-06-15

CLINICAL INDICATION & TECHNIQUE

Indication: 3D nerve canal tracing for tooth 48 and sinus graft planning.

STRUCTURED OBSERVATIONS & FINDINGS

- **Mandibular Canal & Tooth 48:**
  3D cross-sectional reconstruction reveals inferior alveolar nerve canal running in direct contact with the lingual aspect of tooth 48 root apex with absence of intervening cortical bone. [Confirmed - 3D Verified]
- **Maxillary Sinus Floor (Quadrant 1):**
  Residual alveolar ridge height at site 15 is 3.5 mm beneath sinus floor.
  Diagnostic Certainty: Confirmed

RADIOLOGIST IMPRESSION

- **High surgical risk for nerve injury with complete tooth 48 extraction; coronectomy advised.**
- **Subantral bone height requires sinus lift augmentation for implant placement.**

RECOMMENDATIONS & CORRELATION

Perform coronectomy for tooth 48. Plan lateral window sinus augmentation at sites 14-15.
